

Sustainability plan development begins

Development of Carstairs' Municipal Sustainability Plan has begun with the second meeting of the plan's steering committee already completed.

The MSI is designed to provide the town with guidance over the next five to 10 years in the areas of economics, governance, environment, and social and cultural issues.

The committee, consisting of various community leaders and residents, concluded its first meeting on March 4 where members introduced themselves and identified the committee's role going into the future.

Members were introduced to many of Carstairs' existing features in the five identified areas. They were then shown MSI plans from other municipalities.

Development is still underway for a website dedicated to the plan that will eventually be found on the Town of Carstairs' website.
